

HOW THE ARIZONA BRACE WORKS

The Arizona Brace is the only patented, clinically tested ankle brace of its kind for the treatment of posterior tibialis tendon dysfunction and other disorders of the foot.

The Arizona Brace was designed for the treatment of posterior tibialis tendon dysfunction (PTTD). It is the only brace tested to be 90% effective at treating PTTD as an alternative to surgery.

The brace fits into a comfort shoe and stabilizes the ankle area, the talocalcaneal, midtarsal and subtalar joints. It provides medial and lateral stability to minimize sinus tarsi impingement and reduces either forefoot abduction or adduction. Overall, the Arizona AFO's patented design relieves pain of the foot and ankle complex and increases mobility.

INDICATIONS

- Ankle arthritis or DJD (Degenerative Joint Disease)
- Ankle, subtalar or midtarsal trauma
- Charcot foot
- Chronic Achilles tendonitis
- Extra support for the obese patient
- Increased stability for varum or valgum at the knee
- Paralytic equinus or drop foot
- PTTD (Posterior Tibial Tendon Dysfunction)
- Severe pronation or pes planus
- Sports injuries, such as chronic ankle sprains
- Talocalcaneal varus or valgus
- Tibialis tendonitis (posterior or anterior)

ANTERIOR / POSTERIOR VIEW OF LEFT FOOT

Calcaneus brought under talus as much as possible - Lateral impingement is relieved
- Navicular supported - Forefoot abduction reduced - NO PAIN.

AN ALTERNATIVE TO SURGERY. AN ALTERNATIVE TO PAIN.

The Arizona AFO has been proven to be an alternative to surgery for the treatment of certain foot disorders. Its unique design provides pain-free mobility for literally thousands of new patients each year.

The Arizona AFO is widely recognized at the "Gold Standard" for the treatment of PTTD and similar conditions.

QUALITY MATERIALS. QUALITY USA WORKMANSHIP.

An Arizona AFO uses only the finest materials and craftsmanship to provide the best quality available for your patient care.
